

# VAMP 50 series

with native IEC 61850 and arc flash protection

The VAMP 50 series protection relay family is based on proven technology concepts developed in close cooperation with customers. Vamp products have been designed around user-friendliness, a feature which is proven in our customer reports day after day.

The VAMP 50 overcurrent and earth fault protection relay has been developed to cover basic protection needs for OEMs, utilities and industrial applications. Thanks to its cost-effective and flexible design, the Vamp 50 provides an excellent alternative for various protection applications.

Vamp 52 combines further protection functions such as directional earth fault for feeder and motor protection.

Arc flash sensors connected in the advanced arc option module typically trips the breaker within 7 ms.

## CUSTOMER BENEFITS

### Robust and flexible hardware

- Modular design with versatile hardware expansion for communication, arc protection and digital I/O extension
- Designed for demanding industrial conditions
- Slimline models available

### Common technology for cost efficiency

- Powerful CPU supporting native IEC 61850
- Utilisation of common VAMP platform accessories
- Improved safety with economical and fast arc flash protection (optional)

### User-friendly and high functionality

- Common firmware platform with VAMP 200 and 300 Series
- Only active functions visible for the operator
- Standard USB connection (type B) for setting software (VAMPSET)

### Modern Human Machine Interface (HMI)

- Large and clear LCD display
- Single line diagram mimic with control, indication and live measurements
- Programmable function keys and LEDs

# VAMP 50 family: low and mid range relay series with IEC 61850

## EASE OF USE

User-friendliness has always been a feature of VAMP products, and the VAMP 50 series is no exception. A great deal of effort has gone into the design of the operational aspects of the new products.

The rapid setting and download/upload is achieved with the unique VAMPSET setting software which dramatically improves usability. Unicode support allows the menu text and settings to be translated into various international languages including for example Russian and Chinese. The informative human machine interface shows all of the required information for the user with support of customised legend texts.

## VAMP 50 FAMILY HMI INTERFACE

### Navigation push buttons

### Function buttons with:

- User configurable legend texts
- CB control
- Protection setting group selection
- Freely programmable

### Programmable LEDs

- User configurable legend texts
- 12 LEDs, 2 fixed (power, error) and 8 freely programmable (2 for push buttons)

### 128 x 64 LCD

### dot matrix display

- Single line diagram and freely assignable analogue values
- Unicode language support

### Local port

- USB interface

The template for user legend texts is a part of the product documentation.

The texts are printed on a transparent film allowing customisation of the relay.

### Two optional module slots

- Extends the functionality of the relay
- Remote port: RS485, RS232 & Ethernet (RJ-45 or fibre)
- Arc, DI/DO

# Enhanced usability

The VAMP 50 protection relay concept has been extended with a number of features that make installation and testing of the relays even more efficient and user-friendly.

## VAMP 50S – COMPACT DESIGN FOR LIMITED SPACE

The VAMP 50 series is now also available as the VAMP 50S, which includes a more compact case than the basic design. The VAMP 50S is an ideal choice for ring main unit switchgear and other applications where a horizontal mounted relay is required.

In the VAMP 50S, the protection, measurement and control functions and communication interfaces are identical to the basic 50 series of relays.

# Communication for Vamp 50 / 52 / 55

Vamp is an expert in communication with vast experience in interfacing different system integrators, SCADA, RTUs, PLCs and gateways using a large number of supported protocols. Flexible adaptation of the communication protocols together with powerful and easy to use software tools are the key to successful integration. VAMP 50 series and the VAMPSET tool provide access to practically any power system information you may need.

## NATIVE IEC 61850

The IEC 61850 protocol can be used to read or write static data or to receive events sent spontaneously from the relay. In addition, the interface allows peer-to-peer communication between the relays, known as GOOSE. The IEC 61850 interface is configured with familiar, user-friendly VAMPSET software.

The IEC 61850 datamodel, data-sets, report control blocks and GOOSE communication are configured according to the requirements of the system configuration. VAMPSET is also used to produce ICD files, which may be needed for the substation integration.

The Vamp 50 series IEC61850 implementation is native, which means the functionality is integral to the product design and software, providing fast and efficient operation.

## VAMP 50 COMMUNICATION PROTOCOLS

- IEC 60870-5-101

# Arc flash protection

When traditional time-grading or blocking protection coordination principle is used, it may not provide fast enough protection of substation faults. Further, high-impedance type of earth-faults may cause prolonged operation times of earth-fault relays leading to the significant release of arcing energy. These facts pose a considerable risk to operation personnel and economical assets. By applying a modern, high-speed arc protection system the damage may be considerably reduced. Such an arc protection system is an optional feature that can be incorporated in all current measuring VAMP relays.

VAMP relays measure fault current and with optional arc protection, also measure light via arc sensor channels, which provide monitoring for the whole switchgear. Should an arc fault occur in the switchgear the arc protection system provides extremely fast tripping of the circuit breaker. The fault will be prevented from spreading and quickly isolated, which may save

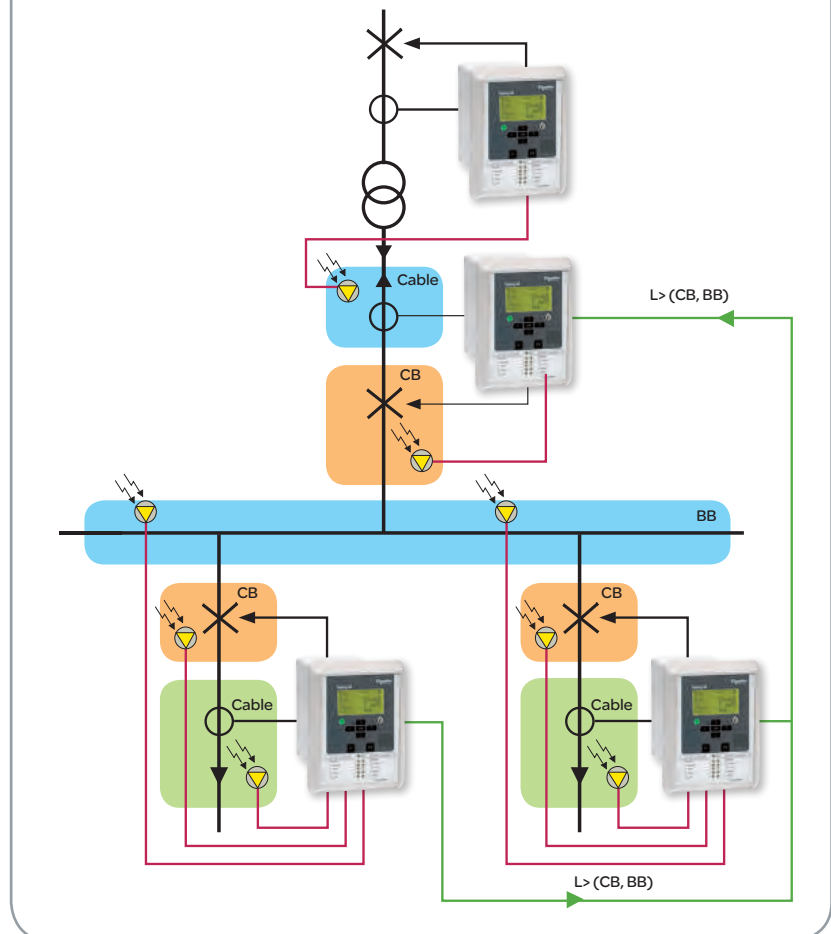

Traditional protection relay systems do not provide fast enough protection in arc-fault situations.

## ARC POINT SENSORS

Arc flash protection integrated in VAMP relays enables substation level, ultra-fast arc protection. The system uses protection relay hardware and separate arc sensors. Any arc flash fault in the cable compartment is selectively cleared by the feeder protection relay. Any arc flash fault in the circuit breaker or busbar compartment is tripped by the incoming circuit breaker. The exact location of the arc flash will be detected by the arc flash and relay protection system.

The optional integrated arc protection system may extend the lifetime of the switchgear.

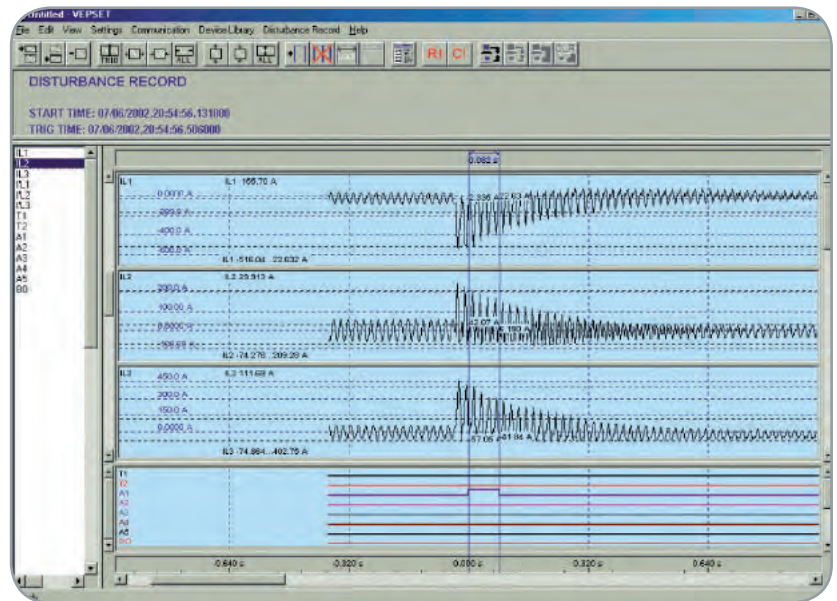

# VAMPSET Setting and Configuration Tool

VAMPSET is a user-friendly, free-of-charge relay management software for setting parameters and configuring VAMP relays. Via the VAMPSET software, relay parameters, configurations and recorded data can be exchanged between PC and VAMP relays. Supporting the COMTRADE format, VAMPSET also incorporates tools for analysing relay events, waveforms and trends from data recorded by the relays, e.g. during a network fault situation.

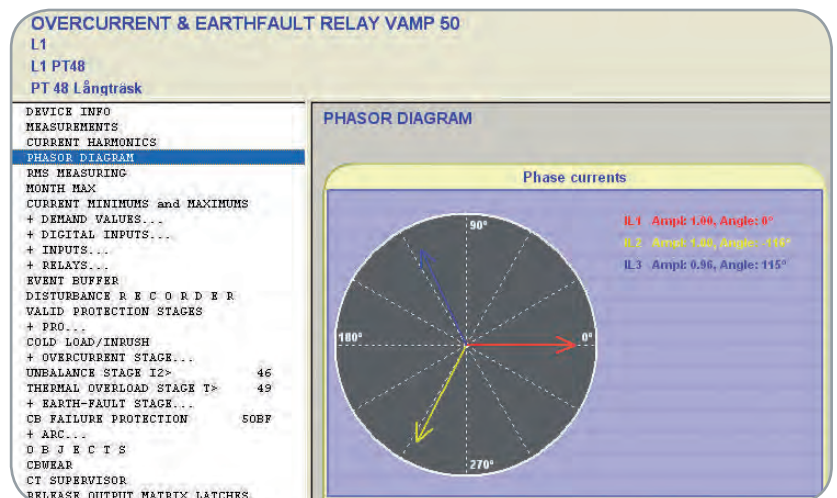

Standard USB communication cable can be used.

Using a standard serial cable the PC running VAMPSET connects to the front port of the VAMP relays. The VAMPSET software also supports TCP/IP communication via an optional port. Featuring true multi-language support the software runs on Windows 7 / Vista / XP / 2000 / NT and Windows 98 / 95 without any need for configuration of the PC.

VAMP relays support standard COMTRADE type disturbance recording files which can be uploaded/downloaded for evaluation of any network event recorded.

The phase sequences for currents and voltages can be read on-line from the clear and explicit phasor diagram screen for easy commissioning of the relay.

The VAMPSET software is future-proof, supporting future updates and new VAMP products.

## INPUT /OUTPUT OPTIONS

The VAMP 50 series host various optional modules in order to upgrade the relay functionality from basic to more advanced applications.

	VAMP 50	VAMP 52	VAMP 55
Analog inputs	3 x I 1 x Io	3 x I 1 x Io, 1 x U	4 x U
Digital inputs	2 (7)	2 (7)	2 (7)
Trip relays	4 (5)	4 (5)	4 (5)
Control relays	1	1	1
mA output	Option	Option	Option
Arc protection	Option	Option	-
Front port	USB	USB	USB
Optional rear port	RS 485/RS 232/ Fibre/Ethernet	RS 485/RS 232/ Fibre/Ethernet	RS 485/RS 232/ Fibre/Ethernet
External RTD input module	Option	Option	Option

# Measurements and condition monitoring

The VAMP 50 series offers a complete set of measurement functions to replace the conventional metering functions of switchgear and controlgear installations. The measurement functions cover phase, line and residual currents, current imbalance, system frequency and harmonics from phase currents. Condition monitoring continuously monitors trip circuits, breaker wear and current

Type of measurement	IEC Symbol	Protection function / measurement	Feeder protection		Motor protection	Special applications

CB wear		Breaker wear	●	●	●	

# Protection stages

User-friendliness is also a built-in feature of protection stages, where setting views are graphically displayed in the relay and VAMPSET HMI. Disabled protection stages are hidden from the menu in order to display only the necessary information. Protection stages come with two setting groups to enable automatic transfer from main setting to alternative setting. This change can be universal for the entire relay or based on protection function.

The relay has a large number of standard inverse curves to adopt various protection requirements. Unique protection curves can be applied when standard IEC or IEEE curves do not provide required protection selectivity.

Type of fault.	IEEE Device No.	IEC Symbol	Protection function / measurement	Protection			
				Feeder		Motor	Voltage

# VAMP 52 feeder and motor protection relay

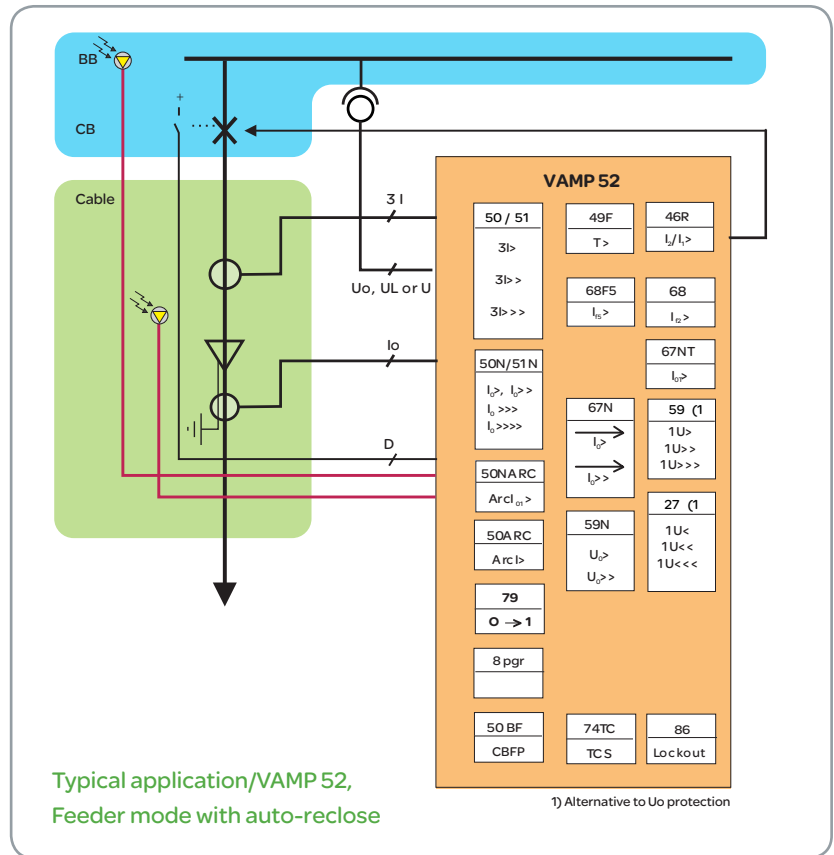

VAMP 52 is a multi-function relay used for LV and MV feeders in industrial or utility applications.

Extensive thermal protection functions make this relay optimal for low and medium sized asynchronous motors. Directional earth fault protection in association with autoreclose function makes this relay cost effective for feeder protection applications where automatic fault clearance is needed.

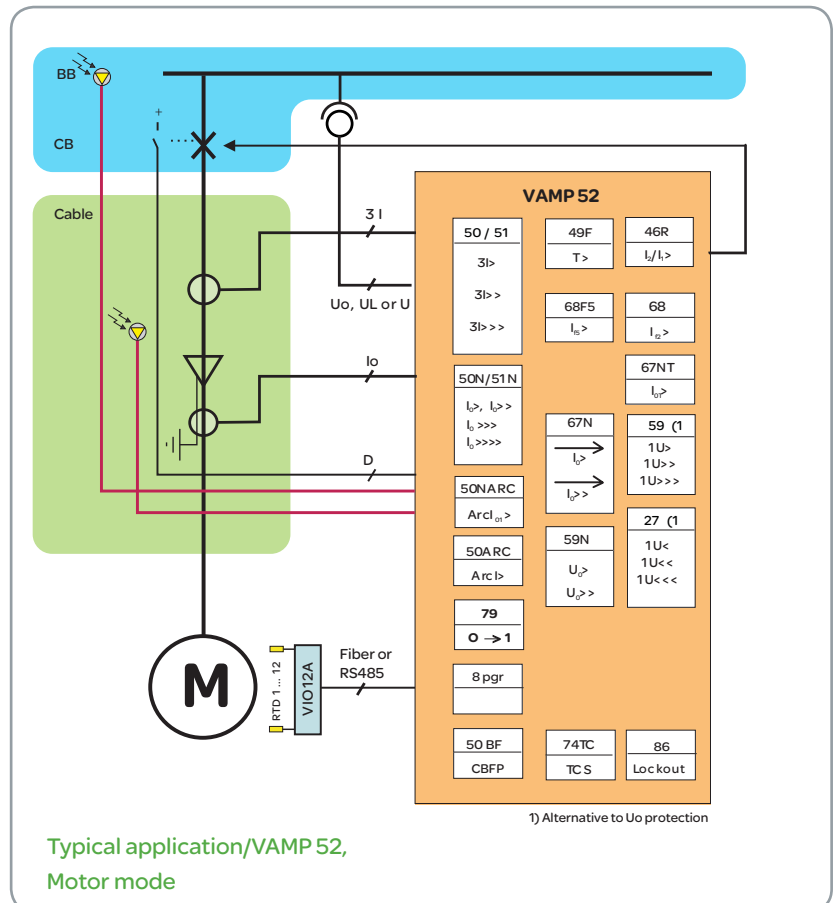

Vamp 52 is flexible, user-friendly and easy to use. The hardware design allows simple addition of integrated optional modules like arc sensor interface, extension of DI / DO channels and various communication modules.

The VAMP 52 relay is also available as a slimline (S) version.

Typical application/VAMP 52, Feeder mode with auto-reclose

# Main technical data

Auxiliary voltage	
Voltage range	40...265 V ac / dc (option A) 18...36 V dc (option B)

Measuring circuit	
Rated phase current $I_N$	1A/5A
Current measuring range	0.005...50 x $I_N$
Rated neutral current $I_{ON}$	1 A or 5 A (optionally 0.2 A or 1 A)
Current measuring range	0.003...10 x $I_N$
Thermal withstand	4 x $I_N$ (continuous) 100 x $I_N$ (for 1 s)
Rated frequency $f_N$	50 / 60 Hz (45..65 Hz)

I/O	
Digital inputs (external voltage)	2 pcs (7 option)
Selectable nominal voltage (threshold)	24 / 110 / 220 V ac / dc
Trip contacts	4 pcs (5 option)

	= Default		= Default

**Note:**

\*\* Option available only with communication module 1: B and L

!! Supply voltage has to be 110 Vac/dc or more. Check out our website for DualPortEthernetInterface\_AppNote\_006".

## ACCESSORIES

Order code	Description	Note
VX052-3	USB programming cable (Vampset)	Cable length 3 m
VX054-3	Interface cable to VPA 3 CG (Profibus module) for RS 232	Cable length 3 m
VX044	Interface cable to VIO 12 (RTD module)	Cable length 2 m
VSE001PP	Fibre optic Interface Module (plastic - plastic)	Max. distance 1 km
VSE001GG	Fibre optic Interface Module (glass - glass)	Max. distance 1 km
VSE001GP	Fibre optic Interface Module (glass - plastic)	Max. distance 1 km
VSE001PG	Fibre optic Interface Module (plastic - glass)	Max. distance 1 km
VSE002	RS485 module	
VPA3CG	Profibus DP fieldbus option board	Requires external power module, to be used when both ethernet and profibus communications are needed
VIO 12 AA	RTD Module, 12pcs RTD inputs, Optical Tx Communication (24-230 Vac/dc)	
VIO 12 AB	RTD Module, 12pcs RTD inputs, RS 485 Communication (24-230 Vac/dc)	
VIO 12 AC	RTD/mA Module, 12pcs RTD inputs, PTC, mA inputs/outputs, RS232, RS485 and Optical Tx/Rx Communication (24 Vdc)	
VIO 12 AD	RTD/mA Module, 12pcs RTD inputs, PTC, mA inputs/outputs, RS232, RS485 and Optical Tx/Rx Communication (48-230 Vac/dc)	
VA 1 DA-6	Arc Sensor	Cable length 6 m
VA 1 DA-20	Arc Sensor	Cable length 20 m
V50WAF	V50 wall assembly frame
